Subject: [EXTERNAL] News on Glyphosate

Dear Commissioners and Board of Health,

This was announced on November 25, "EPA finds Glyphosate Is likely to injure or kill 93% of endangered species." This came from Trump's EPA!

The same EPA that took all restrictions off of nearly 2000 pesticides when he told them to. I didn't see anything about this very serious prediction on the national or local news, so thought I should bring it to your attention, since you have been preoccupied with the Corona virus and people who don't believe in science. I found that a bit ironic. When I sent studies about glyphosate to you, two members of the Board of Health insinuated that the studies were a "witch hunt against Monsanto" - their words, not mine. From the studies that my colleagues and I did regarding what is happening to wild and domestic animals here in Ravalli County and in all of North America, many more species than endangered ones are being injured or killed, including humans, especially newborns. Glyphosate also was shown by other researchers' studies to damage the immune system of exposed vertebrates, including that of humans, not a particularly good thing when there is a pandemic.

Sincerely,
Judy Hoy
