Ravalli county airport is a vital asset to this county. First of all I think most people will agree that safety is paramount. Take offs and landings require a certain distance for each aircraft and the current aircraft which use the airport including the light jets and twin engine really need the 5200 foot runway for safety.

Second, our airport brings in many people to our community which brings in dollars!

Third, by extending the runway it would allow fire fighting aircraft to use our airport.

Any community which has grown has a safe, dependable, and well maintained airport.

By improving our airport it will benefit the community.

Gary Kling
Corvallis
