Subject: We are not that far from Canada
Attachments: Glyphosate and newborn pig poster.jpg

Dear Ravalli County Commissioners and BOH,

There is a petition in Canada promoting testing for Glyphosate in humans because tests for damage to living organism that can be incurred by exposure to Glyphosate/Roundup were not done prior to registering Roundup for use in Canada and likely before registering it in the United States. Other countries are finally recognizing the severe damage that Roundup does, especially to newborns (see attachment).

The following letter is about the effort to get testing for Glyphosate instigated in Canada. Hopefully it will promote similar actions in the United States.

Thank you for your consideration of this serious issue.

Sincerely,
Judy Hoy

Provincial Governments to be advised

Tony Mitra
Delta, Canada
Nov 14, 2015 — Hello friends,

  Our initial goal was to collect 15,000 supporters before the letter was sent to the newly elected Minister of health and a copy to the Prime Minister. That letter had been sent.

A follow up letter is being prepared with attachments including list of supporters and a consolidated file of the comments many of them wrote. 

Meanwhile, we are now thinking of sending copies to corresponding ministries (agriculture & health) of the provincial Government of BC, where I live. The purpose of that letter would be on one side to keep them apprised that glyphosate may have been approved in Canada without checking safety test data, and at the same time to encourage them to start testing our food for glyphosate. Labs are coming out with this service in Canada which were not available last year. We the citizens are getting ready to start our own testing with locally available food and people's urine, for finding out how much of this biocide we are exposed to.

It may be a good idea for folks to also consider writing or petitioning their own provincial ministries to be aware of this situation, (that glyphosate may have been approved without seeing any safety test record), and to encourage them to start testing local food for glyphosate, and make the result available to the people.  

Then there is also the ongoing citizen drive of testing our urine to find out how many of us, and to what extent, we may have gotten this poison in us already. Here too, the local Government and our healthcare system can consider getting engaged.  

Lots of exciting things on our plate, all for protecting ourselves from potential toxicity in our food system which the industry does not want us to know about.  

GLYPHOSATE FOUND IN ORGANS OF BIRTH DEFECT PIGLETS BORN TO GMO FED SOWS

to testing ordered by Danish pig farmer, Ib Pedersen, finds glyphosate in the organs of all birth defect piglets. "The more glyphosate, the more birth defects," he says bluntly.

**THIS LEADS US TO ASK:
WHAT LEVEL OF GLYPHOSATE IS IN THE
ORGANS OF HUMAN BEINGS THAT HAVE
EATEN GMOS WITHOUT THEIR KNOWLEDGE
OR CONSENT?**
