**Subject:** Two new very important studies  
**Attachments:** BeechamSeneff Glyphosate - Autism.pdf; Ultra-low exposure to Roundup & liver disease.pdf

Dear Ravalli County Commissioners and Ravalli County Board of Health,

I just received these two studies from colleagues. They are very important with regard to the effects of extremely low levels of glyphosate to developing children. One of these studies is about the serious affects on the liver of exposed animals and the other is concerning glyphosate exposure and autism.

Both of these studies should be of concern to anyone, especially to those who have been elected or appointed to protect the health and lives of humans and other animals in Ravalli County. I hope that you will at least read the abstracts.

Thank you. Sorry to bother you again today, but the studies I have sent to you today are quite important.

Sincerely,  
Judy Hoy
